

**COMMON QUESTIONS — ANSWERED DIRECTLY****"Won't this just dump at launch?"**

84% of total supply is locked at TGE. The team is on a **36-month Sablier stream** — they can't sell at launch any more than you can. Only 16% circulates on day one. And 50% of presale tokens stream to your wallet daily over 15 months — not all at once.

There is no single moment where a wall of tokens can hit the market. Contrast this with most launches where insiders hold massive unlocked positions and dump on day one.

Verify: team vesting stream address on Basescan · \$GRAF contract — no mint function

"How do I know you won't take the money and disappear?"

You don't have to trust us. Verify it.

- **LP locked 24 months on-chain** — paste the UNCX transaction hash. The liquidity cannot be removed until the lock expires.
- **Treasury is a Gnosis Safe 3-of-5 multisig** — requires 3 of 5 signers to move a single dollar. Public address, viewable by anyone.
- **No mint function** — supply is fixed at 1,000,000,000. Verifiable on Basescan.
- **SolidProof audit** — independent third-party review of every function in the contract.

A rug pull requires removing LP or minting new tokens. Both are impossible here.

"What if nobody uses the network?"

Graphene Council members — professionals already working inside the graphene industry — committed **\$25,000 before the public presale opened**. That capital is locked in the LP for 24 months.

These aren't crypto speculators hoping a network gets built. They're manufacturers, researchers, and distributors who need the coordination infrastructure to exist. The demand isn't hypothetical — it's demonstrated by the people who wrote checks before anyone else could.

"How do I actually sell? What's the exit?"

\$GRAF trades on Aerodrome Finance on Base — live at TGE. Any wallet can sell at any time, no permission required.

The AMM liquidity pool uses the $x \times y = k$ formula — it is **mathematically impossible** to drain to zero. The pool will always have USDC available to buy your tokens, regardless of how many people sell. You are never locked in. The only variable is the price you receive — which depends on pool depth at the time of your trade. *Verify: Aerodrome pool address on Base · pool USDC balance · $x \times y = k$ formula*

"Is graphene even a real market?"

Yes. The global graphene market is valued at **\$1.08 billion today** and projected to exceed **\$5 billion by 2030** (CAGR ~28%). Active buyers include Samsung, aerospace manufacturers, defense contractors, and advanced composites producers.

Graphene is the strongest material ever tested — stronger than steel, more conductive than copper, flexible, and transparent. It's already in production. The bottleneck isn't the material — it's the fragmented industry infrastructure for verification, sourcing, and coordination. That's the problem the Graphene Council solves.

"Why does this need a token? Why not just a membership fee?"

A membership fee is static. \$GRAF is programmable.

- **Staking** — lock \$GRAF to earn from the 150M token protocol rewards pool
- **Governance** — vote on network decisions, treasury allocations, membership criteria
- **Transferable** — sell or transfer your council seat without asking anyone's permission
- **Verifiable on-chain** — membership status is public and unforgeable

None of that is possible with a subscription. The token is the access layer — not a fundraising wrapper.

"What happens to my money if the project fails to hit soft cap?"

Full refund. Automatically. If the presale does not reach \$120,000 by TGE, every participant receives 100% of their USDC back. No action required. This is enforced by the smart contract — not a promise from the team. *Verify: presale contract refund function · soft cap threshold*

The most common question from experienced participants. Here's the honest comparison:

❌ VC / PRIVATE ROUND

Preferential pricing — insiders pay less
Board seats and control clauses
Valuation games and side agreements
12–18 month raise timeline
VCs dump on retail at TGE
You find out later what insiders paid
Community has no say

✅ \$GRAF PRESALE

Flat pricing — same rate for everyone
No board, no control, no strings
Every term is public and on-chain
Raise closes at TGE — clean timeline
Council members in at same price as you
Full transparency from day one
Token holders govern the network

WHY IS 50% OF YOUR PRESALE ALLOCATION LOCKED?

Graphene doesn't move at crypto speed.

Council members have material already produced. **Purification, certification, and commercialization take months — not days.** A 15-month stream keeps every participant aligned with the real-world timeline of the industry.

Fast unlocks reward flippers. Streams reward builders. The 50% stream is a signal: the people who designed this structure believe in the 12-month timeline, not the 12-minute trade.

What the 15-month stream looks like on \$1,000 entry:

- **Day 1 (TGE)** 324,675 tokens available immediately in your wallet. Stake, sell, or hold.
- **Day 1 onward** ~721 tokens per day stream to your wallet automatically. Claimable anytime on the dashboard.
- **Month 15** All 649,351 tokens fully in your possession. Stream complete.

VERIFICATION — DON'T TRUST. CHECK.

🔒 Smart Contract Audit

Independent review by SolidProof before TGE.
Every function examined. Badge live on DEX Screener.

→ SolidProof report: [link at TGE]

💰 LP Lock — 24 Months

\$25,000 liquidity locked on UNCX before TGE.
Cannot be removed. Verifiable by anyone with the tx hash.

→ UNCX lock: [tx hash at TGE]

Gnosis Safe Treasury

3-of-5 multisig. Requires 3 separate signers to move any funds. Public address on Base.

→ Safe address: [published at TGE]

Team Vesting — Sablier

Team tokens on 30-day cliff + 36-month stream. No bulk unlock. 1,388,889 tokens/month max.

→ Sablier stream: [published at TGE]

No Mint Function

Total supply fixed at 1,000,000,000. The contract has no mint capability. Supply cannot be inflated.

→ Basescan contract: [published at TGE]

Soft Cap Refund

If \$120K soft cap is not reached, 100% refund is enforced by the smart contract. No action needed.

→ Presale contract: [published at TGE]

WHY BASE CHAIN?

Base is Coinbase's L2, with **\$10B+ in TVL**, sub-cent transaction fees, and institutional backing. It's the fastest-growing L2 in the ecosystem.

Aerodrome Finance is the largest DEX on Base by volume — deep liquidity, battle-tested contracts, and the standard for serious Base-native projects.

We chose Base because it's where serious DeFi participants already are — not a gambling chain chasing hype, but a professional infrastructure layer built for longevity.

\$GRAF is a utility token granting access to the Graphene Council protocol on Base. It is not an investment vehicle, security, or financial instrument, and does not represent equity, debt, or any ownership interest in any legal entity. Participation in the presale involves substantial risk, including the risk of total loss of funds. The protocol operates autonomously on-chain — no central party manages, controls, or guarantees outcomes after deployment. The \$2,922 reference figure is a mathematical calculation based on the network launch rate of \$0.004500 per token and does not constitute a guarantee, projection, or promise of any future value. Token price after TGE is determined by open market activity and may be significantly lower than the network launch rate. Only participate with funds you can afford to lose entirely. This document does not constitute financial, investment, or legal advice. Consult a qualified professional in your jurisdiction before participating.
