✅ Verified — no rounding errors

Circulating at TGE: 160,400,000 (16.0%) — 84% locked. Comparable low-float launches: Uniswap 15% · Optimism 5% · Arbitrum 12%. Low float = supply discipline = price moves faster on organic buying.

Buyer Experience

Every presale buyer is profitable at TGE — no exceptions

Flat price: \$0.001539 — same for every buyer. No tiers, no early-bird exclusives, no whale advantages. The presale discount is 65.8% below TGE price for everyone from \$100 to \$5,000.

DEPOSIT	TOTAL TOKENS	LIQUID AT TGE (50%)	VALUE DAY 1	DAY 1 ROI	FULL POSITION VALUE

Capital Structure

Where every dollar goes

MILESTONE	TOTAL RAISE	TREASURY CASH	POOL USDC (POST-BOT)	FDV/LIQ	BOT PUMP	PEAK FDV
Soft Cap	\$120K	\$65,000	\$102,500	167:1 ✓	+281%	\$17.2M
Phase 2	\$200K	\$108,333	\$120,833	108:1 ✓	+191%	\$13.1M
Phase 3	\$270K	\$146,250	\$136,875	82:1 ✓	+148%	\$11.2M
Hard Cap	\$360K	\$195,000	\$157,500	61:1 ✓✓	+115%	\$9.7M

FDV/Liq ratio context: Under 200:1 = buyers enter comfortably. Comparable launches: Uniswap 156:1 · Arbitrum 134:1. \$GRAF at hard cap is 61:1 — among the strongest ratios in its class.

Pool Survival Proof

The pool mathematically cannot be drained to zero

$x \times y = k$ (AMM constant product formula)

Where: x = USDC in pool · y = tokens in pool · k = constant

To drain USDC to \$1 you'd need:

$k \div \$1 = 2,568,055,555,556$ tokens

Total token supply = 1,000,000,000

Required = 2,568× total supply → IMPOSSIBLE

Monte Carlo Results — 50,000 Simulations Each

SCENARIO	SIMULATIONS	POOL DEATHS	MIN USDC SEEN	STATUS
Hard Cap (\$157,500 pool)	50,000	0	\$14,534	✓ PASS
Soft Cap (\$102,500 pool)	50,000	0	\$6,932	✓ PASS

100% Dump Scenario — Step by Step (Hard Cap)

SELLER	TOKENS SOLD	PRICE RECEIVED	USDC OUT	POOL USDC LEFT
Seller 1	20M	\$0.004438	\$88,765	\$68,735
Seller 2	20M	\$0.001271	\$24,495	\$44,240
Seller 3	20M	\$0.000521	\$11,413	\$32,827
Seller 4	20M	\$0.000302	\$6,602	\$26,225
Seller 5	20M	\$0.000197	\$4,304	\$21,921
Sellers 6–8	60.4M	diminishing	~\$7,387	~\$14,534

Emergency Rescue Rule: If pool USDC drops below \$10,000 → treasury injects \$20,000 within 48 hours. Public, irrevocable commitment. Backed by \$195K treasury cash at hard cap.

Volume Bot — Human-Optimized

440 transactions over 7 days · indistinguishable from organic community activity

Design philosophy: The bot must pass a human eye test on DEX Screener. No uniform sizes. No metronome timing. No 100% buy ratio. Real markets have variance — the bot mimics that variance precisely.

PHASE 1 — LAUNCH DAY

\$25,000

~4 hours · +52% pump · triggers trending · DEX Screener boost handles discovery

PHASE 2 — DAYS 2–11

\$25,000

\$2,500/day · 10 days · sustained chart activity · bridges to organic volume

Why \$25K/\$25K split? DEX Screener Boost handles launch day discovery — the bot doesn't need to carry that alone. Shifting \$5K from Phase 1 to Phase 2 extends sustained volume from 6 days to 10 days. By day 10–11, organic buyers should be sustaining volume independently. The bot's only job is to bridge the gap between zero activity at launch and real community traction.

Buy Size Distribution (Log-Normal — Matches Real Retail Behavior)

SIZE RANGE	% OF BUYS	READS AS
\$20 — \$50	~36%	"Just checking it out" tier
\$50 — \$200	~45%	Typical degen buy
\$200 — \$500	~15%	Moderate conviction
\$500 — \$1,000	~3%	"I believe in this"
\$1,000 — \$1,500	~1%	Early insider dip — believable max
Max single buy	\$1,500 — above this triggers whale alert bots, looks manipulated	

Buy/Sell Ratio — The Authenticity Layer

METRIC	OUR BOT	WHAT IT SIGNALS
Buy ratio	83%	Hot but real — "people are excited"
Sell ratio	17%	Profit-taking — "people believe enough to hold"
Sell sizes	\$20–\$400	Small exits, not panic dumps
Sell trigger	1 per ~5 buys	Randomized position

100% buy ratio

Never

Instant bot flag on DEX Screener

Timing — Randomized Gaps (No Metronome)

GAP TYPE	% OF TXNS	RANGE	SIMULATES
Double-buy (FOMO)	~6%	20 – 75 sec	Someone excited, buys twice fast
Normal gap	~75%	1 – 7 min	Regular community activity
"Checking Twitter" pause	~12%	7 – 15 min	Person distracted, came back
Long break	~7%	15 – 25 min	Someone AFK, returned to buy

Professional Launch Checklist

Every item that separates a trusted project from one people scroll past

With this full stack in place, **\$GRAF is indistinguishable from a \$10M funded project**. Audit badge. Locked LP. KYC founders. CoinGecko listed. Organic-looking chart. Live streaming dashboard. Every trust signal a serious buyer checks.

● Non-Negotiable — Must Have Before Launch

Smart Contract Audit **CRITICAL**

\$1,500–2,000

SolidProof (German, 1,500+ audits, Forbes-featured). Badge appears on DEX Screener card. Single biggest rug-signal without it. Timeline: 3–14 days.

Founder KYC Badge **CRITICAL**

\$300–500

SolidProof KYC — identity verified with auditor, NOT publicly revealed. Shows "Founders KYC  " on token page. Means someone is accountable.

LP Lock On-Chain **CRITICAL**

~\$100

UNCX / Unicrypt on Base. Lock tx hash shared publicly — any buyer pastes it and sees "locked until 2028." Arty's \$25K. This separates \$GRAF from 99% of rugs.

DEX Screener Token Profile **CRITICAL**

Free

Logo, description, website, socials on your Screener card. Submit 48h before launch. Free but required — without it you're an anonymous contract address.

Presale Website **CRITICAL**

\$0–2,000

Amount slider (\$100–\$5K), ROI calculator, streaming dashboard, tokenomics page, team section (pseudonymous + KYC badge), roadmap. Must look like a \$5M project.

Litepaper (8–12 pages)

\$0 (in-house)

Problem, solution, tokenomics, roadmap, team. V9 tokenomics doc is 90% of this already. Funds won't look twice without one.

Telegram + Discord

Free

Telegram: announce channel + community group. Discord: #announcements #tokenomics #presale-info #general. Moderation bots from day 1. No community = no buyers.

● High Priority — Launch Week

DEX Screener Boost **LAUNCH DAY**

\$300–500

Paid placement on DSC homepage. The actual trending lever — organic algo alone is not guaranteed. 500–2,000 boost points. Buy on launch day alongside bot Phase 1.

CoinGecko Listing

CRITICAL

Free + \$500–1K expedited

MetaMask, Zerion, Zapper, Trust Wallet, Rainbow all pull prices from CG. Without it: token shows \$0 in every wallet. Submit free listing + expedited review day of launch. Submit early — it's a queue.

CoinMarketCap Listing

Free

Different audience (retail vs degen). Free submission, 2–6 week queue. Submit same day as CoinGecko.

DEXTools Listing

Free

Second major aggregator alongside DEX Screener. Own trending/hot pairs section. Free, submit after launch.

💰 Total Launch Overhead Budget

CATEGORY	LOW	HIGH	SOURCE
Audit + KYC (SolidProof)	\$1,800	\$2,500	Treasury
LP Lock (UNCX)	\$100	\$100	Treasury
DEX Screener Boost	\$300	\$500	Treasury
CoinGecko Expedited	\$500	\$1,000	Treasury
Website (if hired)	\$0	\$2,000	Treasury
Total	~\$2,700	~\$6,100	<3% of \$195K treasury

Presale Structure — Two-Phase + Access Code

Controlled raise with built-in FOMO and soft cap protection

The presale is designed to **control risk, build FOMO, and never launch underfunded**. Access codes create exclusivity. The live raise counter creates urgency. The 48h public window creates a hard deadline. The soft cap refund protects every buyer.

Phase 1 — Code-Gated (Controlled Raise)

Access code required to join whitelist

Codes distributed via Telegram, personal outreach, Graphene Council contacts, X posts. Creates exclusivity — people ask "how do I get a code?" which is organic marketing.

Live raise progress bar on website

Real-time counter: "\$247,832 raised of \$360,000 — 69% filled." Humans join things that are filling up. Visible progress converts fence-sitters.

Referral codes — every holder gets one

Each whitelisted wallet gets a unique code (e.g. GRAF-X7K2). Share with your network. Tied to referral bonus — +10% tokens per referral. Turns every buyer into a distributor.

Whitelist closes at fixed date regardless of raise total

E.g. "Whitelist closes in 14 days." Clean transition to Phase 2. Narrative is "whitelist phase complete" not "we opened up because it was slow."

Phase 2 — Public 48h Window

Code requirement drops 48 hours before TGE

Anyone can buy — no code needed. Announcement fires: "Presale goes public. TGE in 48 hours. Last chance at 65.8% below launch price." That announcement IS the marketing moment.

Soft cap safety — never launch underfunded

If raise is tracking below \$120K when Phase 2 opens → delay TGE, extend whitelist, push harder. Never launch with thin pool and 3 months treasury. The soft cap refund clause makes buyers trust the presale MORE.

Decision Framework — When to Launch

**RAISE AT PHASE 2
OPEN**

ACTION

OUTCOME

\$120K–\$360K

Open public, fire TGE in 48h

✓ Launch on schedule

\$80K–\$119K

Push codes harder, extend whitelist 1 week

⚠ Delay TGE slightly, hit soft cap first

<\$80K

Delay TGE, regroup, push harder

Better than launching underfunded

\$120K raised but stalled

Open public anyway — extra goes to treasury/LP

✅ More raise = healthier launch

The two-phase structure means you never get surprised on launch day. You know your raise total before committing to a TGE date. The code-gated phase is your intelligence — it shows you exactly where you stand with time to act.

TGE Launch Sequence

Minute-by-minute from T-14 days to T+7 days

T-14d	DH snapshot locked · Bot wallet aging begins (5–10 wallets pre-funded, aged to look organic) · SolidProof audit submitted
T-7d	Audit complete + badge live · KYC badge live · Token profile submitted to DEX Screener · CoinGecko + CMC submissions filed · Telegram + Discord launched
T-48h	Announce exact TGE time · Pre-fund LP wallet · Confirm all presale registrations · Gnosis Safe 3-of-5 deployed + tested
T-60min	Send 50% liquid tokens to presale buyers · Create Sablier streaming contracts for remaining 50% · Final audit of all wallet addresses
T-0 🚀	Deploy Aerodrome LP — Arty's \$25K seed + LP split from raise · Lock 24 months via UNCX · DEX Screener Boost activated
T+5min	Volume bot fires — Phase 1 begins · ~165 txns over ~4 hours · \$150 avg buy · randomized sizing \$20–\$1,500 · randomized gaps 20sec–25min · 83/17 buy/sell ratio
T+1h	~60 txns complete → DEX Screener trending pickup · Price climbing organically · Announcement post: "We just launched"
T+4h	Phase 1 complete · \$25K deployed · Price at ~\$6.8M FDV (+52% from TGE) · Bot pauses · Presale buyers at 4.4x their entry · Staking goes live (all 4 tiers)
Day 2	Phase 2 begins · \$2,500/day · ~17 txns/day · randomized 20–90 min gaps · looks like community checking in · DEX Screener Boost traffic arriving
Days 2–11	\$2,500/day sustained volume · price walks from \$6.8M → \$9.7M FDV · chart looks like organic accumulation · boost + bot working together · anyone arriving via boost sees live chart
Day 11	Phase 2 complete · \$50K bot budget fully deployed · 440 total txns · by now organic buyers sustain volume independently · CoinGecko/CMC listings confirmed · First burn report · CEO update on X

Staking Tiers — Live at TGE

150,000,000 token pool. Fixed — no inflation. 36-month drip. Every staked token cannot dump.

TIER	NAME	LOCK	APR*
1	Raw Carbon	0 days	~21%
2	Graphite	7 days	~42%
3	Graphene	30 days	~84%

4	Pristine	90 days	~127%
---	----------	---------	-------

*At 40% staked participation rate

Burn Schedule

Continuous auto-burn from every transaction + milestone burns from 50M reserve.

TYPE	RATE	ROUTING
Buy tax	2.5%	1% burn · 1% LP · 0.5% treasury
Sell tax	5.0%	2% burn · 1.5% LP · 1.5% treasury

FDV MILESTONE	TOKENS BURNED
\$3,000,000	10,000,000
\$5,000,000	15,000,000
\$10,000,000	25,000,000

CASH AT SOFT CAP

\$65,000

~6 months ops runway @ \$10K/mo

CASH AT HARD CAP

\$195,000

~19 months ops runway @ \$10K/mo

Draw Rules

1 Cash first

Never touch treasury tokens while cash balance remains

2 Volume gate

Never sell more than 5% of prior 24h trading volume per day

3 30-day notice

Any large treasury token draw announced 30 days in advance

4 Emergency rescue

\$20K LP injection within 48h if pool USDC drops below \$10K

5 Revenue buyback (Year 2+)

Business revenue → buyback-and-burn program
